MANAGEMENT PHILOSOPHY

Created on 31 December 2007, DORVAL CONVICTIONS is a diversified Eurozone fund. Its equity component may vary between 0% and 100%. The asset management approach seeks to limit capital losses in periods of market decline while increasing exposure to equities in periods of recovery. The benchmark index is composed of 50% the overnight reference rate (capitalised EONIA) and 50% the 50 largest listed European companies (EUROSTOXX 50 NR), total return since January 1st, 2013.

The process involves 4 steps: determining the equity exposure rate, identifying investment themes, determining the equity allocation per capitalisation and selecting individual companies. The remainder of the portfolio is invested in money market and fixed income funds in order to preserve the capital and reduce the portfolio's overall volatility.

RISK AND REWARD PROFILE

The risk-return scale (profile) is an indicator with a score from 1 to 7. It corresponds to an increasing level of risk and return. It is the result of a regulatory methodology based on annualised volatility, calculated over 5 years. Checked on a periodic basis, the indicator can vary.

PERFORMANCE

MONTHLY COMMENTARY

In May, we decided to reduce our exposure to equities to less than 50% in the run-up to the first round of the French presidential elections, in light of opinion polls showing voting intentions very close to the 20% threshold for four candidates, leaving room for highly diverse scenarios. Following the results of the first round, we increased our exposure to more than 75%.

The market reacted well to the prospect of stability for the economic region, which the elections could have called into question. Furthermore, all economic data confirmed the recovery in global growth, especially in Europe. In this regard, a recovery in investment could be seen, including in countries like Italy. For all these fundamental reasons and in view of the reduction in the political risk premium in Europe—likely to be applied with the return of international investors—we remain invested in Dorval Convictions. In addition, both the statements and latest earnings releases of companies held in the portfolio point to future upward revisions of their results. Over the course of the month, Dorval Convictions gained 2.60 %, a 1% rise on the market, pushing its performance above 11%.

RISK ANALYSIS

Ratio	1 Yr	3 Yrs	5 Yrs

LEGAL INFORMATION

All data relating to the fund are obtained from the book inventory and data relating to the indices and the characteristics of securities held in the portfolio are obtained from Bloomberg. The figures indicated relate to previous years. Past performance is not a reliable indicator of future performance. Investors are reminded that the composition of the portfolio may differ considerably from that of its benchmark index. As the management style is discretionary, the portfolio will never seek to reproduce the composition of the benchmark index either on a geographical or sector level. The benchmark index is therefore simply an a posteriori performance indicator. The risks and costs relating to investment in UCITS are described in the relevant prospectus. The prospectus and periodic reports are available on request from Dorval Asset Management. The prospectus must be provided to investors prior to subscription. The definition of risk indicators mentioned in this document may be found on the website: www.dorval-am.com. Prior to any investment, it should be verified that the investor is legally authorised to invest in a UCITS. The UCITS is not authorised for distribution in jurisdictions other than the countries in which it is registered. Performance data does not take into account fees and commissions received in respect of the issue and redemption of units or tax costs imposed by the client's country of residence. If a UCITS is subject to a specific tax regime, it should be noted that this regime depends on the individual situation of each client and may be liable to change. This document is intended for professional and non-professional clients. It may not be used for any purpose other than that for which it was designed and may not be reproduced, distributed or transmitted to third parties, either in whole or in part, without the prior written authorisation of Dorval Asset Management. The information contained in this document may not be deemed to have any contractual value whatsoever. Dorval Asset Management may not be held responsible for any decision taken on the basis of information contained in this document. Dorval Asset Management, société anonyme (public limited company) with share capital of EUR 296,747.50 registered in the Paris trade and companies register under number B 391 392 768 - APE 6630 Z, AMF approval no. GP 93-08

Definitions

Flexible fund:	Financial product for which the allocation between asset classes varies over time in order to adapt to new market configurations at any time.
Alpha:	A fund's outperformance compared with its benchmark, expressed as a percentage. This is an indicator of the manager's ability to create value, by excluding the market effect. Therefore, the higher the alpha, the better the fund's performance compared with that of its benchmark.
Beta:	Measure of a fund's sensitivity to market movements (represented by its benchmark). A beta higher than 1 indicates that the fund amplifies the trends of its reference market on the upside as well as on the downside. Conversely, a beta lower than 1 means that the fund tends to react less to movements in its reference market.
Sharpe ratio:	Indicator of a product's outperformance relative to a risk-free interest rate, given the risk taken (the product's volatility). The higher it is, the better the fund.
Volatility:	Magnitude of the variation of a security, a fund, a market or of an index over a given period. A high volatility means that the price of the security varies significantly, and therefore that the security's associated risk is high.
Maximum performance:	Maximum gain historically recorded by the fund.
Maximum drawdown:	Maximum loss historically recorded by the fund.
Recovery period:	Time expressed in number of days the fund takes to exceed the highest net asset value over the indicated period.
Gain frequency:	Calculation over the fund's history since its creation representing the ratio of the number of positive observations to the total number of observation in the period.
Exposure as a percentage:	The fund's overall exposure takes into account the sum of the physical and off-balance sheet positions. As opposed to positions called of net assets: "physical"(those booked in the portfolio's inventory of assets), off-balance sheet positions include those taken in forward financial instruments, such as derivatives. Examples of derivatives: futures contracts, swaps, option contracts. A maximum limit to off-balance sheet exposure is stated in the prospectus.

Past performance is no guarantee of future results. References to rankings, awards and/or ratings are not an indicator of future performance by the fund or the fund manager.

The Morningstar rating applies to funds with a history of at least three years. It takes into account subscription fees, the risk-free return and the fund's volatility in order to calculate the MRAR (Morningstar Risk Adjust Return) ratio for each fund. The funds are then ranked by decreasing order of MRAR: the first 10% receive 5 stars, the next 22.5% 4 stars, the next 35% 3 stars, the next 22.5% 2 stars, and the last 10% receive 1 star. The funds are ranked within 180 European categories.
