MANAGEMENT PHILOSOPHY

Created on 15 December 2008, Dorval Global Convictions, is a flexible and diversified fund. Its equity component may vary between 0% and 100%. The benchmark index is composed of 50% Eonia and 50% MSCI global index of international equities, the MSCI World NR (EUR), calculated with net total return since 1 January 2013. The investment strategy is a Three-step process : 1) The global macroeconomic environment is analysed in order to appropriately determine the asset allocation with respect to asset class, geographical choices as well as the identification of the main investment themes 2) creation of thematic and/or geographical baskets of shares or/and bonds on the basis of a quantitative filtering of the investment universe by liquidity criteria, financial analysis and valuation in order to apply fund managers' analysis 3) An active management of risk hedging

RISK AND REWARD PROFILE

The risk-return scale (profile) is an indicator with a score from 1 to 7. It corresponds to an increasing level of risk and return. It is the result of a regulatory methodology based on annualised volatility, calculated over 5 years. Checked on a periodic basis, the indicator can vary.

PERFORMANCE

	1Mth	3Mths	6Mths	YTD	1Yr	3Yrs	5Yrs	Since 15/12/2008

MONTHLY COMMENTARY

The stock-market recovery that kicked off in late December continued with ongoing talks between the US and China, a solid US economy and a fresh accommodative stance from the Fed. However, Europe remains a source of concern, as the economy continues to slow, the European Central Bank is seemingly passive, and the spectre of Brexit still looms large. 4Q GDP estimates for the euro area (+0.2% qoq, +1.2% yoy) confirmed that economic growth fell below its potential pace for the first time since 2013. In two euro area countries, Italy and probably Germany, a "technical" recession materialised in the second half of 2018, while the latest business and household surveys fuel fears that the first quarter of 2019 will not be much better.

However, the arguments pointing to a recovery scenario are solid, with the disappearance of temporary factors that dented output over recent months, be they regulatory changes in the automotive sector (which account for part of the decline in GDP in Germany and Italy), the impact of yellow vest unrest in France, and the consequences of the sharp surge in Italian yields last summer. Meanwhile, monetary conditions remain favourable in the euro area, with negative real interest rates, excellent credit availability in most areas, and a much cheaper euro against the dollar as compared to last year. Lastly, wage trends, falling oil prices and current fiscal policies are set to shore up purchasing power in 2019.

However, we slightly reduce our portfolio's equity risk in the short term, in light of the swift rebound on the equity markets at a time when a number of uncertainties still remain and corporate earnings growth projections have been severely downgraded.

RISK ANALYSIS

Ratio	1 Yr	3 Yrs	5 Yrs
Alpha	-0.17	-0.03	-0.04
Beta	0.42	0.71	0.87
Sharpe Ratio	-1.87	0.34	0.36
Tracking Error	5.19	4.24	3.97
Information Ratio	-1.74	-0.65	-0.70
Volatility DGC Share R	3.9	5.0	6.0
Volatility Benchmark	6.6	5.8	6.7
Ratio	Value		
Max performance	67.7%	from 10/03/09 to 29/01/18	
Max drawdown	-16.9%	from 13/04/15 to 12/02/16	
Recovery period	692	Days	
Profitable months	61.5%	monthly	

MONTHLY EXPOSURE SINCE INCEPTION

(*) Past performance is not a reliable indicator of future performance. Performance calculation takes into account net dividend re-invested for the fund and net dividend re-invested for the benchmark since 1st January 2013.

PORTFOLIO BREAKDOWN

Equities Exposure Rate	25%

LEGAL INFORMATION

All data relating to the fund are obtained from the book inventory and data relating to the indices and the characteristics of securities held in the portfolio are obtained from Bloomberg. The figures indicated relate to previous years. Past performance is not a reliable indicator of future performance. Investors are reminded that the composition of the portfolio may differ considerably from that of its benchmark index. As the management style is discretionary, the portfolio will never seek to reproduce the composition of the benchmark index either on a geographical or sector level. The benchmark index is therefore simply an a posteriori performance indicator. The risks and costs relating to investment in UCITS are described in the relevant prospectus. The prospectus and periodic reports are available on request from Dorval Asset Management. The prospectus must be provided to investors prior to subscription. The definition of risk indicators mentioned in this document may be found on the website: www.dorval-am.com. Prior to any investment, it should be verified that the investor is legally authorised to invest in a UCITS. The UCITS is not authorised for distribution in jurisdictions other than the countries in which it is registered. Performance data does not take into account fees and commissions received in respect of the issue and redemption of units or tax costs imposed by the client's country of residence. If a UCITS is subject to a specific tax regime, it should be noted that this regime depends on the individual situation of each client and may be liable to change. This document is intended for professional and non-professional clients. It may not be used for any purpose other than that for which it was designed and may not be reproduced, distributed or transmitted to third parties, either in whole or in part, without the prior written authorisation of Dorval Asset Management. The information contained in this document may not be deemed to have any contractual value whatsoever. Dorval Asset Management may not be held responsible for any decision taken on the basis of information contained in this document. Dorval Asset Management, société anonyme (public limited company) with share capital of EUR 303,025 registered in the Paris trade and companies register under number B 391 392 768 - APE 6630 Z, AMF approval no. GP 93-08

Definitions

Alpha:	A fund's outperformance compared with its benchmark, expressed as a percentage. This is an indicator of the manager's ability to create value, by excluding the market effect. Therefore, the higher the alpha, the better the fund's performance compared with that of its benchmark.
Beta:	Measure of a fund's sensitivity to market movements (represented by its benchmark). A beta higher than 1 indicates that the fund amplifies the trends of its reference market on the upside as well as on the downside. Conversely, a beta lower than 1 means that the fund tends to react less to movements in its reference market.
Sharpe ratio:	Indicator of a product's outperformance relative to a risk-free interest rate, given the risk taken (the product's volatility). The higher it is, the better the fund.
Volatility:	Magnitude of the variation of a security, a fund, a market or of an index over a given period. A high volatility means that the price of the security varies significantly, and therefore that the security's associated risk is high.
Maximum performance:	Maximum gain historically recorded by the fund.
Maximum drawdown:	Maximum loss historically recorded by the fund.
Recovery period:	Time expressed in number of days the fund takes to exceed the highest net asset value over the indicated period.
Gain frequency:	Calculation over the fund's history since its creation representing the ratio of the number of positive observations to the total number of observation in the period.
Exposure as a percentage:	The fund's overall exposure takes into account the sum of the physical and off-balance sheet positions. As opposed to positions called of net assets: "physical"(those booked in the portfolio's inventory of assets), off-balance sheet positions include those taken in forward financial instruments, such as derivatives. Examples of derivatives: futures contracts, swaps, option contracts. A maximum limit to off-balance sheet exposure is stated in the prospectus.

Morningstar methodology

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

Past performance is no guarantee of future results. References to rankings, awards and/or ratings are not an indicator of future performance by the fund or the fund manager.

The Morningstar rating applies to funds with a history of at least three years. It takes into account subscription fees, the risk-free return and the fund's volatility in order to calculate the MRAR (Morningstar Risk Adjust Return) ratio for each fund. The funds are then ranked by decreasing order of MRAR: the first 10% receive 5 stars, the next 22.5% 4 stars, the next 35% 3 stars, the next 22.5% 2 stars, and the last 10% receive 1 star. The funds are ranked within 180 European categories.
