Benchmark index	S&P 500® Low Volatility High Dividend Net Total Return Index

## Investment objective

The PowerShares S&P 500 High Dividend Low Volatility UCITS ETF aims to provide investors with investment results which, before expenses, correspond to the price and yield performance of the S&P 500® Low Volatility High Dividend Net Total Return Index (a dual-factor index) in US dollar terms by holding, as far as practicable, all of the Index's constituents in their respective weighting. The index constituent universe is reviewed twice a year in January and July.

## Benchmark index description

The S&P 500 Low Volatility High Dividend Index ("the benchmark") measures the performance of the 50 least-volatile high dividend-yielding stocks in the S&P 500 Index while meeting diversification, volatility and tradability requirements (achieve a balance between dividend yield and volatility). All S&P 500 Index constituents are ranked in descending order of trailing 12 months dividend yields. The top 75 stocks are selected and the number of stocks per GICS® sector<sup>2</sup> is capped at 10. The 50 lowest realised volatility stocks are selected and weighted by dividend yield (each constituent is capped at 3% and each GICS sector is capped at 25%).

**Past and backtested performance is not a guide to future returns.** Source: S&P Dow Jones Indices, as at 31.07.2016. Investors cannot invest in an index directly. The S&P 500® Low Volatility High Dividend Net Total Return Index returns represent backtested performance for the period 31.12.1998 to 11.09.2012 and actual performance from 12.09.2012, based on rules used in the creation of the index. Backtested performance does not represent actual performance and should not be interpreted as an indication of such performance; it is provided for illustration purposes only. Backtested performance has certain inherent limitations. For example, it ignores certain factors such as the trade timing, security liquidity and the fact that economic and market conditions in the future may differ significantly from those of the past. Accordingly, backtested performance is not a guide or an indicator of future returns.

### Risk warnings

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested.

In tracking the Index, the ETF may be concentrated from time to time in a small number of sectors. ETF investors should be prepared to accept a higher degree of risk than for an ETF that is more widely diversified across different sectors.
