Quarterly fund commentary

Global equity markets ended the year near all-time highs amid solid corporate earnings and accelerating economic growth. Global economic growth continued to be robust and broad-based, driven by industrial activity and investment. Performance in December helped global equity markets achieve their best annual performance since the post financial crisis recovery. The fund concentrates on stocks with attractive risk-return profiles as identified by a systematic investment process which is based on four concepts: Earnings Expectations, Market Sentiment, Management & Quality and Value. This approach can lead to active positions relative to the benchmark; currency exposures are strategically hedged. Looking at the performance attribution for the fourth quarter, the portfolio underperformed its benchmark based on a negative contribution from stock selection. While our momentum related factor Earnings Expectations added to performance, stock specific effects detracted. Implicit country weights contributed positively with our overweight in Australian stocks having the largest impact. Coming into the fourth quarter, the fund's largest allocation from a sector perspective is in consumer discretionary companies.
