Key investor information

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

OBJECTIVES AND INVESTMENT POLICY

The objective of the Fund is to outperform (net of fees) the JP Morgan Emerging Markets Bond Index Global Diversified Index in USD (coupons reinvested), over any given 3-year period.

The Fund invests mainly in investment grade and below investment grade bonds from emerging markets.

Specifically, the Fund invests in fixed and floating rate debt securities that are issued around the world. At the time of investment, these securities are rated at least B- by Standard & Poor's or judged equivalent by the investment manager; however, if they subsequently decline in quality, the Fund may continue to hold them.

The Fund may invest in, or be exposed to, the following investments up to the percentage of net assets indicated:

- equities: 10%
- other UCITS/UCIs: 10%

The Fund may invest in credit notes.

The Fund may hold cash and cash equivalents on an ancillary basis. These may include monetary UCIs or UCIs whose investments' overall weighted maturity or rate reset frequency does not exceed 12 months.

The Fund's net exposure (after hedging) to non-EUR currencies may be up to 100% of net assets.

The Fund's modified duration may vary from 0 to 10.

The investment manager uses global economic and financial analysis, as well as credit analysis to select securities that offer a superior combination of yield and creditworthiness, while ensuring a capacity to resist periods of lower credit risk premiums and/or interest rates at the portfolio level.

The Fund may use derivatives as a substitute for direct investment, for hedging, for efficient portfolio management and to create leverage.

The Fund may also use repurchase and reverse repurchase agreements for efficient portfolio management and to create arbitrage positions designed to profit from changes in interest rate spreads.

You can buy and sell shares of the Fund daily.

All income generated by share Class F (C) EUR of the Fund is reinvested and included in the value of its shares.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within 3 years.

RISK AND REWARD PROFILE

Risk and Reward Profile: The SRRRI (Synthetic Risk and Reward Indicator) demonstrates where the Fund ranks in terms of its potential risk and return. The higher the Fund's position on this scale, the greater possible reward, but also the greater risk of losing money.

The risk category is 4, which reflects the risk of investing in debt instruments in emerging markets, in all sectors.

We bring your attention to the fact that:

- Historical data used in calculating the SRRRI may not be a reliable indication of the future risk profile of the Fund.
 - The risk indicator shown above is not guaranteed and it may shift over time.
- The lowest category does not mean a risk free investment.

Risks materially relevant to the Fund which are not adequately captured in the indicator:

Credit risk: the Fund can invest in debt securities. There is a risk that the issuer may default. The likelihood of this happening will depend on the credit-worthiness of the issuer.

Counterparty risk: the Fund enters into contracts with various counterparties. If a counterparty does not fulfil its obligations to the Fund (e.g. not paying an agreed amount or not delivering securities as agreed) the Fund can suffer a loss.

Interest rate risk: an increase in interest rates may cause the value of fixed income securities held by the Fund to decline. Bonds prices and yield have an inverse relationship, when the price of a bond falls the yield rises.

Risk linked to the impact of management techniques: risk of increased losses owing to the use of financial futures instruments such as OTC financial agreements, and/or the temporary acquisition and transfer of securities, and/or futures contracts, and/or derivative instruments. This risk may lower the net asset value.

Selection risk: the Investment Manager's judgment about the attractiveness, value and potential appreciation of a particular company's security could be incorrect.

Emerging markets risk: emerging markets are more likely to experience political uncertainty and investments held in these countries may not have the same protection as those held in more developed countries.

CHARGES

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.
