Managed by Lyxor International Asset Management S.A.S. ("LIAM")

Investment objectives and policies

The investment objective is to replicate the upward and downward movement of the Dax Mid Cap Index (Bloomberg code: MDAX), increased by any dividends paid by the shares making up the index ("the Benchmark Index"), representative of the 50 German mid-cap companies listed on the flagship Deutsche Boerse index.

The Fund aims to achieve its objective through indirect replication, namely by entering into one or more over-the counter swap agreements (financial futures).

The Fund may invest in a diversified portfolio of international equities, the performance of which will be swapped against that of the Benchmark Index via financial futures. An up-to-date breakdown of the Fund's securities portfolio is provided on the website www.lyxoretf.com.

The net asset value is also indicated on the Reuters and Bloomberg pages of the Fund and may also be stated on the websites of stock markets where the Fund is listed.

The share currency is the Euro (EUR).

Risk and return profile

The risk and return category given above is based on the historical performance of the fund's component assets or its benchmark. As such, this risk estimation cannot be a reliable indicator of future risk, and it could change over time. The lowest category does not mean a risk-free investment. The Fund has been classified as category 5 given its exposure to the Benchmark Index. Category 5 means that there is a potential for moderate losses in capital under normal market conditions. The value of your investment can change in a wide band, both upwards and downwards, very quickly each day.

The significant risks for the UCITS not taken into account in the above-mentioned indicator and which could result in a decrease in the Fund's net asset value and which the Fund is authorised to include in this document (see the Risk Profile section of the prospectus for more information concerning the risks):

- **Counterparty:** the Fund is exposed to the risk of bankruptcy or any other type of default by any counterparty with which it has concluded an agreement or transaction. In accordance with UCITS regulations, this risk may not exceed 10% of the Fund's total assets, for a given counterparty.
- **Risk linked to the use of futures:** in order to achieve its investment objective, the fund uses OTC-traded futures to reach the performance of the Benchmark Index. These futures may be affected by various types of risks such as amendments to the law and/or regulations, including tax regulations.
- **Fund Liquidity Risk:** The Fund's liquidity and/or value may be affected if, when rebalancing its exposure it is unable to execute trades in line with the index.
