

Lyxor UCITS ETF MSCI World Utilities TR - C USD

Ticker: LYUTLW SW

FUND INFORMATION

Description

Lyxor Asset Management ("Lyxor"), a wholly owned subsidiary of the Societe Generale Group, was founded in 1998 with the aim of delivering sustainable performance solutions, offering enhanced transparency, liquidity and flexibility. With more than a decade of experience, Lyxor is a global player in four investment classes: alternative investments, ETFs & indexing, multi-asset and structured investments. Based on research and risk management, Lyxor's business model allows for the engineering of sound and innovative investment solutions. Employing more than 600 professionals, Lyxor is present in all strategic investment locations throughout the world, with offices and affiliates in Europe, Asia and North America. Lyxor brings together the responsiveness of an entrepreneurial organisation and the reliability of an expanding global player, managing over 83 B€ in global assets, 34 B€ of which are ETFs.

Exchange Traded Funds (ETFs)

A UCITS ETF is a UCITS at least one unit or share class of which is traded throughout the day on at least one regulated market or Multilateral Trading Facility with at least one market maker which takes action to ensure that the stock exchange value of its units or shares does not significantly vary from its net asset value and where applicable its Indicative Net Asset Value.

Investment Objective

Lyxor Exchange Traded Funds ("ETFs") are UCITS compliant funds which track a benchmark index by investing in listed equities and entering into total or price return swaps to achieve the index performance. Swap enhanced ETFs are the most efficient way of index tracking resulting in lower tracking error while the swap counterparty bears the risk and cost of tracking the index.

The investment objective is to track both the upward and downward evolution of the MSCI WORLD UTILITIES Net Total Return Index (Bloomberg code: NDWUUTIL) ("Benchmark Index"), representative of utilities companies from the Developed World markets.

Risk Factors

It is important for potential investors to evaluate the risks described below and in the fund prospectus which can be found on www.lyxoretf.com

CAPITAL AT RISK: ETFs are tracking instruments: Their risk profile is similar to a direct investment in the Underlying Index. Investors' capital is fully at risk and investors may not get back the amount originally invested.

REPLICATION RISK: The fund objectives might not be reached due to unexpected events on the underlying markets which will impact the index calculation and the efficient fund replication.

COUNTERPARTY RISK: Investors are exposed to risks resulting from the use of an OTC Swap with Societe Generale. In-line with UCITS guidelines, the exposure to Societe Generale cannot exceed 10% of the total fund assets.

UNDERLYING RISK: The Underlying Index of a Lyxor ETF may be complex and volatile. When investing in commodities, the Underlying Index is calculated with reference to commodity futures contracts exposing the investor to a liquidity risk linked to costs such as cost of carry and transportation. ETFs exposed to Emerging Markets carry a greater risk of potential loss than investment in Developed Markets as they are exposed to a wide range of unpredictable Emerging Market risks.

CURRENCY RISK: ETFs may be exposed to currency risk if the ETF is denominated in a currency different to that of the Underlying Index they are tracking. This means that exchange rate fluctuations could have a negative or positive effect on returns.

LIQUIDITY RISK: Liquidity is provided by registered market-makers on the respective stock exchange where the ETF is listed, including Societe Generale. On-exchange liquidity may be limited as a result of a suspension in the underlying market represented by the Underlying Index tracked by the ETF; a failure in the systems of one of the relevant stock exchanges, Societe Generale or other market-maker systems; or an abnormal trading situation or event.

The MSCI World Utilities Index is a free float-adjusted market capitalization index that is designed to measure the investable universe and the performance of the Utilities listed companies. As of 31 March 2010, the index covers the Utilities listed companies as classified according to the Global Industry Classification Standard (GICS®) in 23 Developed Market countries. It is designed to cover large and mid cap securities and is constructed using the MSCI Global Investable Market Index (GIMI) methodology to match the size, liquidity and minimum free float criteria.
