The risk category is 4 because of investments in government and corporate bonds of any credit quality, and particularly in emerging markets.

We bring your attention to the fact that:

- Historical data used in calculating the SRRRI may not be a reliable indication of the future risk profile of the Fund.
 - The risk indicator shown above is not guaranteed and it may shift over time.
- The lowest category does not mean a risk free investment.

Interest rate risk: an increase in interest rates may cause the value of fixed income securities held by the Fund to decline. Bonds prices and yield have an inverse relationship, when the price of a bond falls the yield rises.

Derivative risk: the Fund uses derivatives. These are financial instruments whose values depend on the value of the underlying asset. Small price fluctuations in the underlying asset can result in large price changes in the derivative.

Liquidity risk: liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund may be unable to transact at advantageous times or prices.
