MANAGEMENT PHILOSOPHY

Created on 22 June 2018, Dorval Global Convictions Patrimoine is a flexible and diversified fund. It invests across all geographies. Its bond and equity components may vary respectively between 0% and 100% and 0% and 30% maximum. The benchmark index is composed of 40% Bloomberg Barclays EU Govt 0-5 Year TR + 40% Bloomberg Barclays EU Govt 5-10 Year TR et pour 20% du MSCI World 100% Hedged to EUR Net TR, calculated with net total return.

The investment strategy is a Three-step process : 1) The global macroeconomic environment is analysed in order to appropriately determine the asset allocation with respect to asset class, geographical choices as well as the identification of the main investment themes 2) creation of thematic and/or geographical baskets of shares or/and bonds on the basis of a quantitative filtering of the investment universe by liquidity criteria, financial analysis and valuation in order to apply fund managers' analysis 3)An active management of risk hedging

RISK AND REWARD PROFILE

Lower risk — *Higher risk*

potentially lower rewards — *potentially higher rewards*

1	2	**3**	4	5	6	7

The risk-return scale (profile) is an indicator with a score from 1 to 7. It corresponds to an increasing level of risk and return. It is the result of a regulatory methodology based on annualised volatility, calculated over 5 years.Checked on a periodic basis, the indicator can vary.

PERFORMANCE

According to article 314-13 of the AMF's general regulations, it is not possible to post performances for periods of less than 12 months.

MONTHLY COMMENTARY

Economic indicators continue to deteriorate, but fiscal and monetary steps taken across the board point to an improvement in the growth outlook over the months ahead. Meanwhile in the corporate world, the latest earnings reporting season has turned out to be nowhere near as disastrous as some investors had feared, with guidance announced for 2019 also better than expected, albeit cautious after the blip in 4Q 2018. This reassuring outlook along with progress on US-China trade talks have helped the international equity and credit markets bounce back and enabled cyclical stocks to make up for some of their underperformance. After the very swift recovery for equities and the ensuing negative technical signals, the million-dollar question now involves market upside for the months ahead. At this stage, we think that the market has retraced its excessive pessimism seen at the end of 2018, so upside will now hinge on the extent of the economic recovery. In the short term, cyclical stocks – which are still lagging after a disastrous 2018 – should be lifted by investor rotation into these investments in their asset allocation strategies. In line with our positive economic scenario for Europe and China, we have therefore bolstered our portfolio's cyclical dimension. However, we may not have seen the last of political risk, so caution will remain the watchword...

RISK ANALYSIS

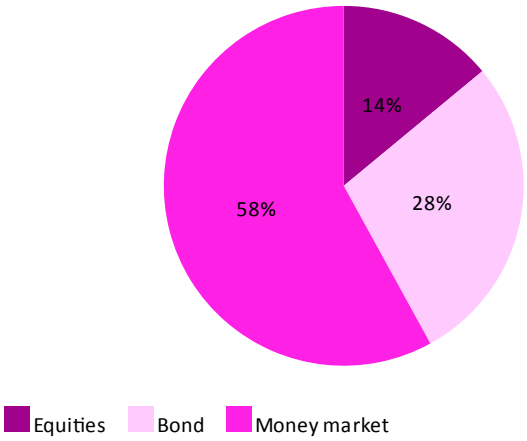

Ratio	Value	Ratio	Value
Alpha	N/A	Max performance	N/A
Beta	N/A	Max drawdown	N/A

LEGAL INFORMATION

All data relating to the fund are obtained from the book inventory and data relating to the indices and the characteristics of securities held in the portfolio are obtained from Bloomberg. The figures indicated relate to previous years. Past performance is not a reliable indicator of future performance. Investors are reminded that the composition of the portfolio may differ considerably from that of its benchmark index. As the management style is discretionary, the portfolio will never seek to reproduce the composition of the benchmark index either on a geographical or sector level. The benchmark index is therefore simply an a posteriori performance indicator. The risks and costs relating to investment in UCITS are described in the relevant prospectus. The prospectus and periodic reports are available on request from Dorval Asset Management. The prospectus must be provided to investors prior to subscription. The definition of risk indicators mentioned in this document may be found on the website: www.dorval-am.com. Prior to any investment, it should be verified that the investor is legally authorised to invest in a UCITS. The UCITS is not authorised for distribution in jurisdictions other than the countries in which it is registered. Performance data does not take into account fees and commissions received in respect of the issue and redemption of units or tax costs imposed by the client's country of residence. If a UCITS is subject to a specific tax regime, it should be noted that this regime depends on the individual situation of each client and may be liable to change. This document is intended for professional and non-professional clients. It may not be used for any purpose other than that for which it was designed and may not be reproduced, distributed or transmitted to third parties, either in whole or in part, without the prior written authorisation of Dorval Asset Management. The information contained in this document may not be deemed to have any contractual value whatsoever. Dorval Asset Management may not be held responsible for any decision taken on the basis of information contained in this document. Dorval Asset Management, société anonyme (public limited company) with share capital of EUR 303,025 registered in the Paris trade and companies register under number B 391 392 768 - APE 6630 Z, AMF approval no. GP 93-08

Dorval Global Convictions Patrimoine

Definitions

Alpha: A fund's outperformance compared with its benchmark, expressed as a percentage. This is an indicator of the manager's ability to create value, by excluding the market effect. Therefore, the higher the alpha, the better the fund's performance compared with that of its benchmark.

Beta: Measure of a fund's sensitivity to market movements (represented by its benchmark). A beta higher than 1 indicates that the fund amplifies the trends of its reference market on the upside as well as on the downside. Conversely, a beta lower than 1 means that the fund tends to react less to movements in its reference market.

Sharpe ratio: Indicator of a product's outperformance relative to a risk-free interest rate, given the risk taken (the product's volatility). The higher it is, the better the fund.

Volatility: Magnitude of the variation of a security, a fund, a market or of an index over a given period. A high volatility means that the price of the security varies significantly, and therefore that the security's associated risk is high.

Maximum performance: Maximum gain historically recorded by the fund.

Maximum drawdown: Maximum loss historically recorded by the fund.

Recovery period: Time expressed in number of days the fund takes to exceed the highest net asset value over the indicated period.

Gain frequency: Calculation over the fund's history since its creation representing the ratio of the number of positive observations to the total number of observation in the period.

Exposure as a percentage: The fund's overall exposure takes into account the sum of the physical and off-balance sheet positions. As opposed to positions called of net assets: "physical"(those booked in the portfolio's inventory of assets), off-balance sheet positions include those taken in forward financial instruments, such as derivatives. Examples of derivatives: futures contracts, swaps, option contracts. A maximum limit to off-balance sheet exposure is stated in the prospectus.
