MANAGEMENT PHILOSOPHY

Created on June 22nd 2018, Dorval Manageurs Euro is a multi-capitalisation equity fund. Eligible to PEA investors (French equity savings plan) Dorval Manageurs Euro invests at least 75% in all sizes of capitalisation and respects a degree of exposure of 60% at least in Euro zone shares. The fund's management (Stéphane Furet and Louis Bert) objective is to outperform the MSCI EMU NET TOTAL RETURN EURO INDEX calculated with net total return over a five-year investment horizon. The fund management team selects companies by drawing on its in-depth knowledge of a company's directors and their managerial profile, favouring equities that offer the best growth prospects within a defined risk budget. Based on its macroeconomic analysis, the fund management team can invest up to 25% of assets in money market mutual funds and debt securities. The portfolio consists of approximately 40 stocks selected with a view to ensure sectorial diversification but without any correlation to a benchmark.

RISK AND REWARD PROFILE

Lower risk — *Higher risk*

potentially lower rewards — *potentially higher rewards*

1	2	3	4	5	**6**	7

The risk-return scale (profile) is an indicator with a score from 1 to 7. It corresponds to an increasing level of risk and return. It is the result of a regulatory methodology based on annualised volatility, calculated over 5 years.Checked on a periodic basis, the indicator can vary.

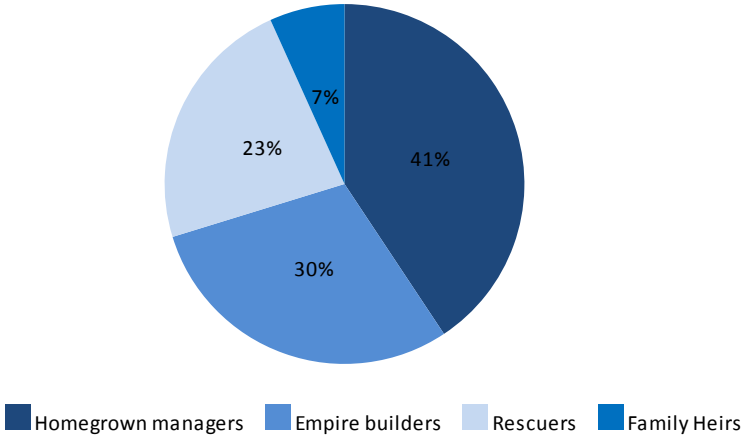

PERFORMANCE

According to article 314-13 of the AMF's general regulations, it is not possible to post performances for periods of less than 12 months.

MONTHLY COMMENTARY

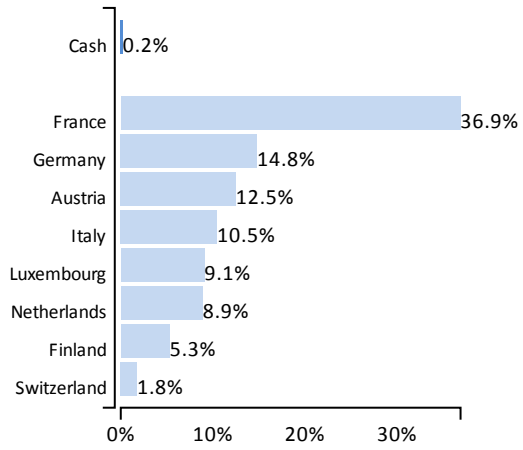

After three successive months on the wane, the markets got back on an uptrend this month, on the back of hopes of a trade agreement between the US and China before March 1, 2019. Solid US macro indicators and reassuring 4Q 18 figures from GAFA companies also shored up this trend. Meanwhile, mid-caps outperformed the large indices over the month (61% of the fund at end-January) on the back of renewed attractive valuations, despite a continued economic slowdown in Europe at the end of last year, particularly in Italy and Germany. Stocks with strong visible growth were propped up by falling long-term rates and displayed the greatest gains over the month (Solutions 30, Altran, S&T, etc.), along with certain mid-caps that had been severely dented last year (Biesse, 2CRSI, Aperam). Finnish stock Neste, one of the world leaders in biodiesel product refining joined our portfolio on the back of expected revisions to the market consensus after its 2018 earnings report and its investor day in late February. We increased our holding in mobile banking fintech Ferratum after its valuation fell to extremely low levels despite the fact that profit growth of over 15% p.a. over the next three years should be confirmed this month. Meanwhile, we also exited two defensives that outperformed the market in 2018 i.e. Orange, in view of hazy visibility on investment from 2019 on and Sanofi due to increasing risks of pricing pressure in the US, the largest pharma market worldwide.

PORTFOLIO BREAKDOWN

(*) Past performance is not a reliable indicator of future performance. Performance calculation takes into account net dividend re-invested for the fund and net dividend re-invested for the benchmark.

LEGAL INFORMATION

All data relating to the fund are obtained from the book inventory and data relating to the indices and the characteristics of securities held in the portfolio are obtained from Bloomberg. The figures indicated relate to previous years. Past performance is not a reliable indicator of future performance. Investors are reminded that the composition of the portfolio may differ considerably from that of its benchmark index. As the management style is discretionary, the portfolio will never seek to reproduce the composition of the benchmark index either on a geographical or sector level. The benchmark index is therefore simply an a posteriori performance indicator. The risks and costs relating to investment in UCITS are described in the relevant prospectus. The prospectus and periodic reports are available on request from Dorval Asset Management. The prospectus must be provided to investors prior to subscription. The definition of risk indicators mentioned in this document may be found on the website: www.dorval-am.com. Prior to any investment, it should be verified that the investor is legally authorised to invest in a UCITS. The UCITS is not authorised for distribution in jurisdictions other than the countries in which it is registered. Performance data does not take into account fees and commissions received in respect of the issue and redemption of units or tax costs imposed by the client's country of residence. If a UCITS is subject to a specific tax regime, it should be noted that this regime depends on the individual situation of each client and may be liable to change. This document is intended for professional and non-professional clients. It may not be used for any purpose other than that for which it was designed and may not be reproduced, distributed or transmitted to third parties, either in whole or in part, without the prior written authorisation of Dorval Asset Management. The information contained in this document may not be deemed to have any contractual value whatsoever. Dorval Asset Management may not be held responsible for any decision taken on the basis of information contained in this document. Dorval Asset Management, société anonyme (public limited company) with share capital of EUR 303,025 registered in the Paris trade and companies register under number B 391 392 768 - APE 6630 Z, AMF approval no. GP 93-08

DORVAL MANAGEURS EURO

Definitions

Alpha: A fund's outperformance compared with its benchmark, expressed as a percentage. This is an indicator of the manager's ability to create value, by excluding the market effect. Therefore, the higher the alpha, the better the fund's performance compared with that of its benchmark.

Beta: Measure of a fund's sensitivity to market movements (represented by its benchmark). A beta higher than 1 indicates that the fund amplifies the trends of its reference market on the upside as well as on the downside. Conversely, a beta lower than 1 means that the fund tends to react less to movements in its reference market.

Sharpe ratio: Indicator of a product's outperformance relative to a risk-free interest rate, given the risk taken (the product's volatility). The higher it is, the better the fund.

Volatility: Magnitude of the variation of a security, a fund, a market or of an index over a given period. A high volatility means that the price of the security varies significantly, and therefore that the security's associated risk is high.

Maximum performance: Maximum gain historically recorded by the fund.

Maximum drawdown: Maximum loss historically recorded by the fund.

Recovery period: Time expressed in number of days the fund takes to exceed the highest net asset value over the indicated period.

Gain frequency: Calculation over the fund's history since its creation representing the ratio of the number of positive observations to the total number of observation in the period.

Exposure as a percentage: The fund's overall exposure takes into account the sum of the physical and off-balance sheet positions. As opposed to positions called of net assets: "physical"(those booked in the portfolio's inventory of assets), off-balance sheet positions include those taken in forward financial instruments, such as derivatives. Examples of derivatives: futures contracts, swaps, option contracts. A maximum limit to off-balance sheet exposure is stated in the prospectus.

Glossary for Managers

In their qualitative analysis of corporate management, the managers classify business leaders in four major categories:
Empire builders : They are real niche creators and able to identify one or more long-term growth opportunities.
Family Heirs : They have a family tie to the builder and assume operational management of the company. They often start with a poor image…which is not always justified. They are often supported in their ventures by an experienced manager.
Homegrown managers : They learned their trade at the company they are now managing. In most cases, they have over 10 years of experience in a management position with the company in an international context.
Rescuers : They have a specific ability to restore the earnings growth of a company. They are put in charge during a crisis or for "reasons of state". These leaders manage various companies in a turnaround situation.
