MANAGEMENT PHILOSOPHY

Dorval Global Convictions carries the French government SRI accreditation and offers a wealth preservation range that invests in global themes considered as buoyant, combining macroeconomic analysis with screening for environmental, social and governance (ESG) opportunities and risks. The fund can steer exposure to the equity markets to up to 60% and/or its investment in the fixed-income markets between 0% and 100%, with a sensitivity range of between -5 and +10 across all geographies, as it seeks to draw on momentum across all potential areas of growth. The portfolio management team singles out themes considered promising across each stage in the cycle and rotates these themes via baskets of stocks and/or bonds, depending on market trends. The fund seeks to offer returns net of fees in excess of the reference indicator, which since September 30, 2021 has comprised 60% of the capitalised €STR index and 40% of the MSCI World Equal Weighted Net Total Return Local Index), net dividends reinvested over a 5-year investment period. The Fund does not seek to replicate this reference indicator and can therefore significantly diverge from it.

FUND MANAGER'S COMMENT

Investors downgraded their interest rate hike expectations this month as inflationary tension showed the first signs of easing and signals emerged of a moderation in economic activity. Their highly cautious positioning drove a clear rebound in risky assets as a result. We gradually unwound our equity futures hedges in response to these developments, with a view to drawing on this intermediate market rebound in our fund. All our equity themes made a positive contribution, including our new basket of US tech stocks, as well as the Green Deal basket which had recently been dented by its more cyclical slant. Uncertainty runs high on future developments in the growth-inflation mix and the markets are set to remain extremely reactive to any signs that could prompt the central banks to take a tougher stance again, particularly after projections eased over recent days. We therefore steer clear of rates, which are even more negative in real terms, and take on moderate equity risk.

Fund risks

Equity investments may be subject to significant share price fluctuations. Fixed-income investments are particularly exposed to changes in interest rates, and the fund may lose value in the event of an increase in interest rates. The fund is exposed to specific risks, particularly risk related to discretionary portfolio management, **risk of capital loss**, equity risk, foreign exchange risk, interest rate risk, credit risk, counterparty risk, risk related to investing in high yield speculative securities, risk related to investing in convertible bonds, risk related to the use of derivatives, risk of investing on the emerging markets, sustainability risk. Invested capital is not guaranteed. You may get back less than you invested. Please refer to the fund prospectus for additional details on risks.

RISK AND REWARD PROFILE

The SRRI level of this UCITS is an indicator with a score from 1 to 7. It corresponds to an increasing level of risk and reward. It is the result of a regulatory methodology based on annualised volatility, calculated over 5 years. Checked on a periodic basis, the indicator can vary.

References to rankings, labels, awards or ratings are not an indicator of the future performance of the fund or the investment manager.

NET PERFORMANCE SINCE INCEPTION (%)

Monthly report as at 29 July 2022

Past performance is not a reliable indicator of future performance. Performance calculation takes into account net dividends re-invested for the fund and net dividends re-invested for the reference indicator since 1st January 2013. Since 09/30/2021, the reference indicator consists of 60% capitalised €STR index and 40% MSCI World Equal Weighted Net Total Return Local Index net dividends reinvested.

INVESTMENT THEMES

Monthly report as at 29 July 2022

FOUR PILLARS OF ANALYSIS

THE MACRO	VALUATION	MARKET DYNAMICS	THE MICRO
The slowdown in global growth is allowing inflationary pressures to fall significantly and long-term rates to decline. Recession probabilities are rising especially in Europe due to Russian gas cuts.	The P/E ratio of global equities has fallen substantially for more than a year, but a significant gap remains between Wall Street and the rest of the world. Bonds remain unattractive, except in a severe recession scenario.	Investors remain pessimistic about economic developments, and have recently divested, which could support the markets in the event of good news.	The corporate earnings season shows a good overall resilience of margins. The drop in commodity prices (excluding European gas) is also good news for some sectors.

20% of outperformance above its index if the fund's performance is positive. The Management Company ensures that over a performance period of 5 years maximum, any underperformance of the UCITS compared to the benchmark index is compensated before performance fees become due.

MORNINGSTAR METHODOLOGY © 2022 Morningstar, Inc. All rights reserved. The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. References to rankings, awards and/or ratings are not an indicator of future performance by the fund or the fund manager. The Morningstar rating applies to funds with a history of at least three years. It takes into account subscription fees, the risk-free return and the fund's volatility in order to calculate the MRAR (Morningstar Risk Adjust Return) ratio each month for each fund. The funds are then ranked by decreasing order of MRAR: the first 10% receive 5 stars, the next 22.5% 4 stars, the next 35% 3 stars, the next 22.5% 2 stars, and the last 10% receive 1 star. The funds are ranked within 180 European categories.

SRI APPROACH AND METHODOLOGY

Dorval Asset Management takes a long-term investment approach, and we firmly believe that we have a pivotal role to play in directing investment to build a more responsible and sustainable economy. We engage with real economy stakeholders to encourage them to adapt their environmental, social and governance practices to support this transition, acting as a responsible investor as we pledge to meet the highest standards with both our clients and partners, as well as with the companies we invest in.

Dorval Asset Management's approach since 2004 has consistently been built on shareholder dialogue, drawing on a practical and collaborative approach in our role as shareholder – further reinforced by our voting policy – as well as in our regular meetings with companies. This governance approach is resolutely grounded in the Manageurs range's philosophy, which includes the original Dorval Manageurs fund.

However, we also look beyond this aspect and include all Environmental, Social and Governance considerations in our extra-financial analysis for securities in our initial investment universe and our assessment of managers.

For more information on our methodologies, please refer to our Dorval AM website: https://www.dorval-am.com/en_FR/our-esg-approach

PROPRIETARY RATING METHODOLOGY

Our proprietary ESG methodology draws on input from our partner MSCI as well as in-house research information to develop issuer ratings across each fund's investment universe.

Our approach is based on the following principles:

- * We assess ESG challenges and allocate an in-house weighting after screening for sector-specific, geographical and market cap considerations;
- * We assign an ESG rating for each issuer based on its exposure to the challenges set out, and the way they are managed by the company.

Our portfolio management teams and our financial and extra-financial analysts screen for 37 ESG challenges based on a range of qualitative and quantitative indicators, with a particular focus on 12 of these aspects.

The extra-financial score - from 0 to 100, with 100 being the top score - is based on each of the E, S and G dimensions. We exclude 20% of the investment universe comprising companies with the lowest scores and with an eliminatory score on at least one of the dimensions. Issuers with an environmental or social rating of less than 10 or a governance score of under 30 are excluded. Any issuer with an overall extra-financial rating of less than 40 is also excluded.

Our methodology draws partly on primary data from an external provider. Our approach places governance at the very center of our ESG analysis and can therefore minimize certain environmental or social risks and opportunities.

Coverage: Calculated as a percentage of total weighting for companies

PORTFOLIO'S CONTRIBUTION TO SUSTAINABLE DEVELOPMENT GOALS

The Sustainable Development Goals (SDG) offer a blueprint to achieve a better and more sustainable future for all. They address the global challenges we face, including poverty, inequality, climate change, environmental degradation, prosperity, peace and justice.

The SDGs are interconnected and it is crucial to achieve both all these goals and their targets out to 2030 to ensure that no-one is left behind.

FIVE MAIN CONTRIBUTIONS TO SDGs (AS % OF FUND)

The total for the SDGs may exceed 100%, as all stocks can contribute to one or several goals. Our calculations draw on MSCI data and are based on companies' alignment with the 17 SDGs, weighted for the proportion each company represents in our fund.

DEFINITIONS

Monthly report as at 29 July 2022

Alpha: Coefficient used to measure a fund's additional positive or negative performance as compared to levels its market risk – as measured by its reference indicator – would justify. We calculate: $\text{Alpha} = \text{Fund average (MoyenneFonds)} - (\text{Reference indicator average (MoyenneIndice)} * \text{Beta})$.

Beta: Measure of a fund's sensitivity to market movements (represented by its reference indicator). A beta higher than 1 indicates that the fund amplifies the trends of its reference market on the upside as well as on the downside. Conversely, a beta lower than 1 means that the fund tends to react less to movements in its reference market. We calculate: $\text{Beta} = \text{Fund-reference indicator covariance (CovarianceFondsIndice)} / \text{Reference indicator variance (VarianceIndice)}$

- Fund-reference indicator covariance (CovarianceFondsIndice): covariance for weekly fund and reference indicator performances

- Reference indicator variance (VarianceIndice): variance in the reference indicator's weekly performances

- Fund average (MoyenneFonds), Reference indicator average (MoyenneIndice): average of weekly performances for fund and reference indicator.

Corporate bond: Bond issued by a private corporation or association. The credit quality depends on the financial situation of the issuing company. These bonds usually carry more attractive returns than sovereign bonds as they carry higher risk.

Credit rating: Assessment of an issuer's credit quality by an independent agency. Dorval AM takes the lowest of the ratings from the three main ratings agencies (Standard & Poor's, Moody's and Fitch).

DNR: Net dividends reinvested

Emerging markets: The fund bases its definition of emerging and developing countries on the full list outlined by the International Monetary Fund.

The €STR (European Short Term Rate) is a new money market benchmark, calculated and published by its administrator, the European Central Bank (ECB), which has been gradually replacing another short-term rate, the EONIA, since 2 October 2019. The €STR is the market benchmark interbank interest rate in the eurozone. It is calculated every day using data collected from several European banks. Further information on the benchmark index is available on its administrator's website: www.ecb.europa.eu.

ETF: Exchange Traded Funds (or trackers) are mutual funds that replicate the performance of an index. They are distinctive in that they are continually traded and can be bought and sold in the same way as equities.

Fixed-income mutual fund: Fund invested in bond and money market.

Fixed-income products: All financial instruments that are highly dependent on interest rates trends. This category includes debt securities such as bonds, marketable debt instruments and EMTN, cash lending and borrowing, repos, as well as derivatives where the underlying is an interest rate.

Flexible fund: Financial product for which the allocation between asset classes varies over time in order to adapt to new market configurations.

Future: A contract whereby an investor can buy or sell a certain amount of a product at a given date in the future – the expiration date – at a price set now.

Gain frequency: Ratio of the number of positive observations to the total number of observations since fund inception.

Gross equity investment rate: The gross equity investment rate is the percentage of assets invested in equities as a proportion of the fund's total assets.

Gross exposure: Fund's direct ownership of shares or bonds issued by a listed (or unlisted) company or sovereign bonds.

Information ratio: The information ratio measures the fund's relative performance adjusted for each point of volatility compared to its reference indicator. We calculate: $\text{Information ratio (RatioInfo)} = \text{Average difference (MoyenneDiff)} / \text{Average standard deviation (StdDevDiff)}$;

- Average difference (MoyenneDiff): The average of the performance differences between the fund and the reference indicator

- Average standard deviation (MoyenneStdDev): The standard deviation of performance differences between the fund and the reference indicator.

Maximum performance: Maximum gain historically recorded by the fund.

Maximum drawdown: Maximum loss historically recorded by the fund.

Modified duration: The percentage price change of a security for a given change in yield.

Recovery period: Time expressed in number of days the fund takes to exceed the highest net asset value over the indicated period.

Net equity exposure rate: The net equity exposure rate is the percentage of assets invested in equities, adjusted for derivatives strategies as a proportion of the fund's total assets.

Risks: Risk data are calculated over a given timeframe based on weekly performances.

Sharpe ratio: Indicator of a fund's outperformance relative to a risk-free rate, divided by the risk taken (fund volatility). The Sharpe ratio measures the marginal performance per unit of risk. The higher the ratio, the higher the fund's risk-adjusted yield. We calculate: $\text{Information ratio (RatioInfo)} = (\text{Annualised fund performance (PerfsFondsAnnualise)} - \text{Risk-free rate (TauxSansRisque)}) / (\text{Fund standard deviation (FondsStdDev)} * \text{Sqrt (52)})$;

- Annualised fund performance (PerfFondsAnnualise): the fund's annualised performance over the investment period

- Risk-free rate (TauxSansRisque): the annualised €STER performance over the investment period

- Fund standard deviation (FondsStdDev): the fund's performance standard deviation.

Sovereign bond: Bond issued by a State to finance its spending. This type of bond offers strong credit quality, providing investors with a degree of assurance as to its redemption.

Volatility: Amplitude in the variation of a financial instrument over a given time period. High volatility means that the share price varies significantly and therefore that the risk associated with the share is high.

DEFINITIONS OF SRI STRATEGIES (ESG REPORTING)

Best-in-Universe: The best-in-universe approach focuses on companies carrying the highest non-financial scores, independently of their business sector. Sectors that are broadly deemed to be most virtuous will be more heavily represented, so this approach can lead to sector bias, which we fully recognize.

Engagement: Our engagement strategy comprises both individual shareholder engagement – exercising our voting rights, conducting direct and constructive dialogue with companies as part of a relationship established over the long term – and collaborative shareholder engagement via various influential financial market bodies: these policies are rolled out to encourage companies and/or policymakers to take on board non-financial criteria.

Exclusion: Our exclusion strategy covers both sector exclusion – ruling out sectors deemed to be harmful to society – and exclusion based on compliance with standards, whereby we exclude companies that do not comply with the United Nations Global Compact and companies subject to controversies that we feel are incompatible with our values.

Integration: Environmental, social and governance criteria (ESG) are directly integrated or embedded in the fund management process via an ESG score developed for each stock in the investment universe. The ESG score is used both to ascertain the eligible investment universe and as a building block for the portfolio construction and management process.

SRI Label: Created by the French Ministry of Finance, this public label aims at giving Sustainable Responsible Investment (SRI) management an extra visibility with savers. To obtain the SRI Label, the certification body conducts an audit to ensure the funds meet a set of labelling criteria. For further information on the methodology, visit www.lalabelisr.fr. References to rankings, labels, awards or ratings are not an indicator of the future performance of the fund or the investment manager.

OUTPERFORMANCE FEE

The Management Company ensures that over a performance period of 5 years maximum, any underperformance of the UCITS compared to the benchmark index is compensated before performance fees become due.
